

HELP INTERNATIONAL - Clustering Assignment

Submission By:

Gaurav Khare

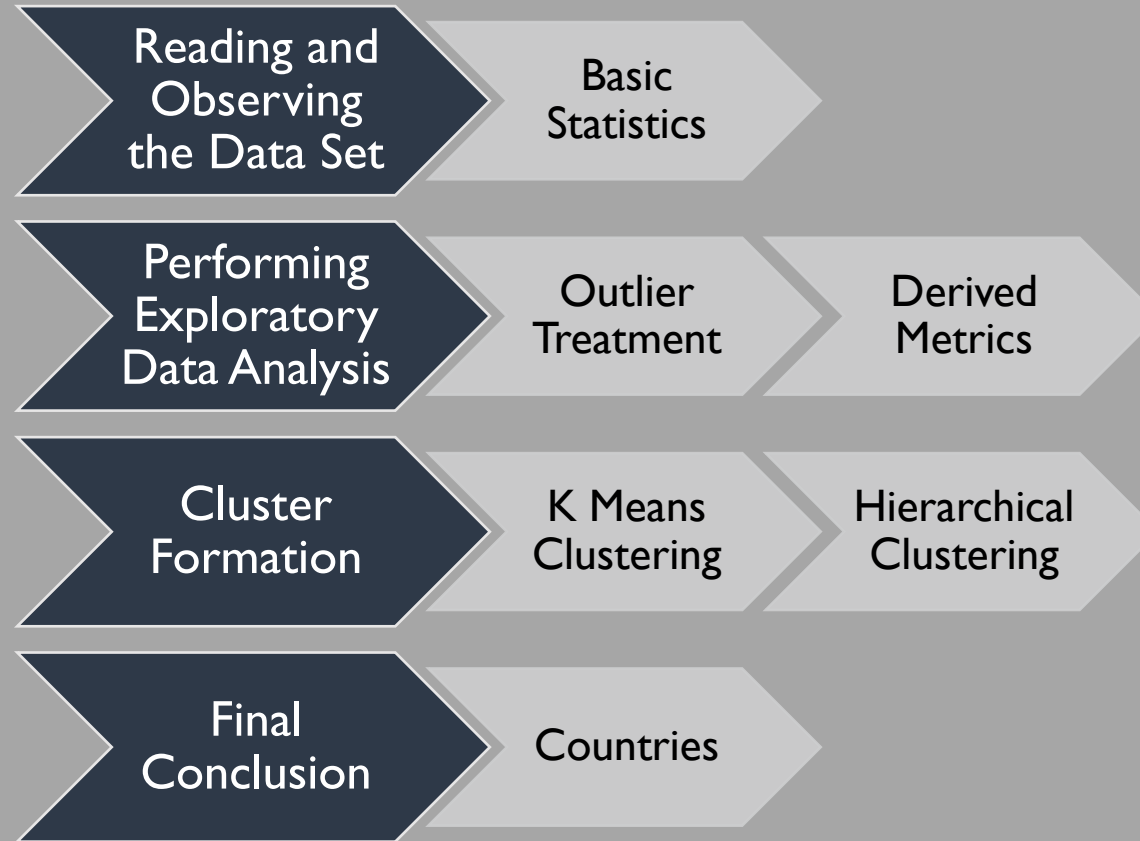

Business Objective

The aim of this analysis is to enable HELP International to make a strategic investment decision to choose countries that are direst need of aid on basis of Socio-Economic And Health factors that are the indicators of overall development of the country

The categorization will suggest us the clusters thus formed by countries which required from Help International.

Approach to the Problem Statement

Country vs Child Mortality

The Top 5 Countries with High Child Mortality

- Haiti
- Sierra Leone
- Chad
- Central African Republic
- Mali

Country vs Income

Top 5 Countries with low Income

- Congo. Dem. Rep.
- Liberia
- Burundi
- Niger
- Central African Republic

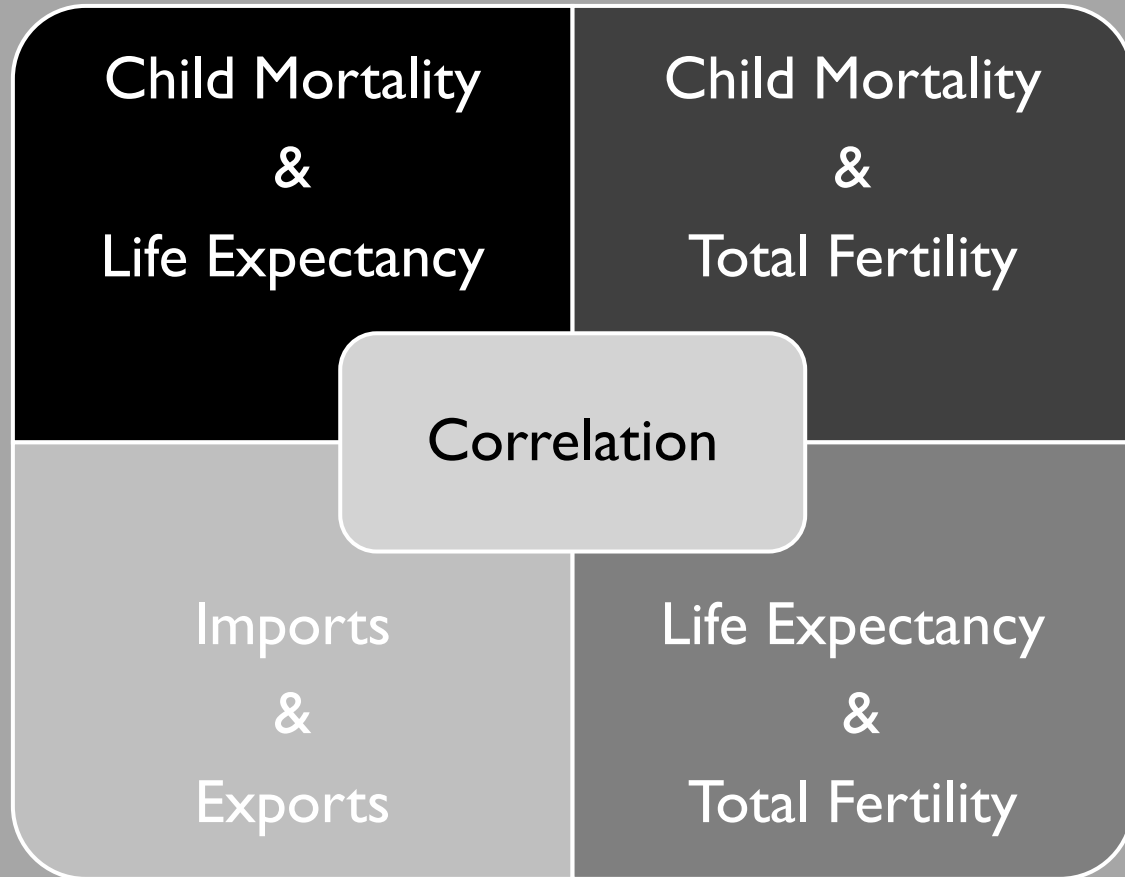

Country vs GDPP

Top 5 Countries with low GDPP

- Burundi
- Liberia
- Congo. Dem. Rep.
- Niger
- Sierra Leone

Correlation between variables

The Silhouette Method

The Elbow Method-SSD

K Means Clustering- All Variables

Based on above plots we recommend countries belonging to Cluster no 2 because of following reasons:

low value of gdp & income

high value of child_mort and total_fer

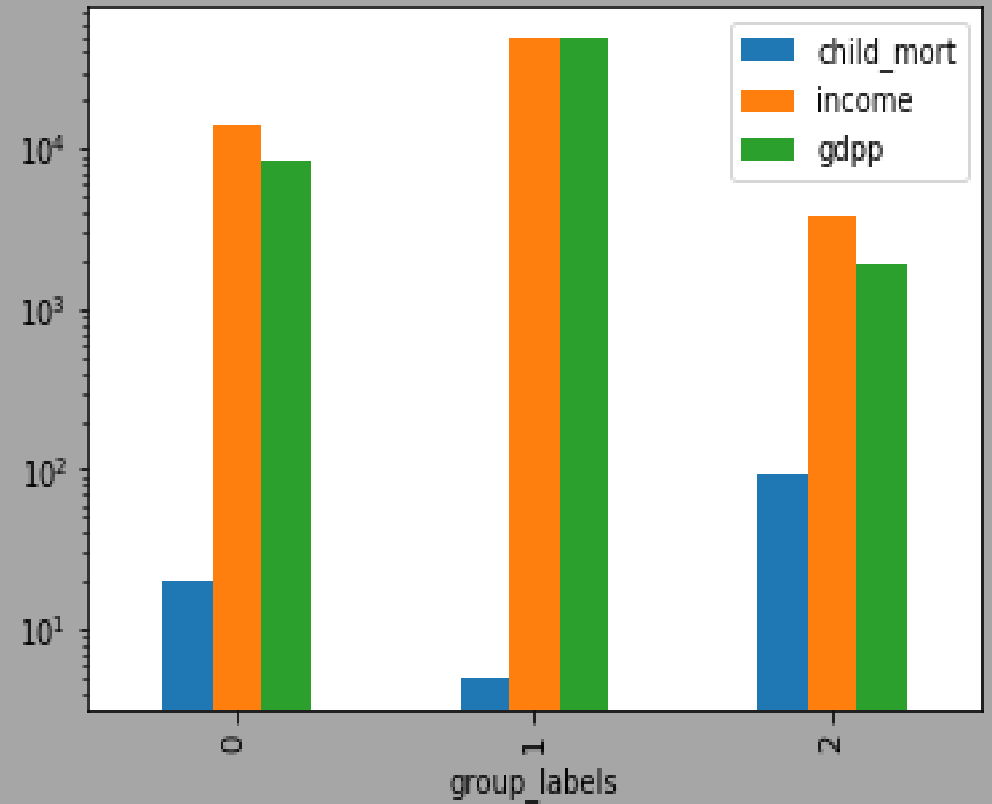

Life_expec is low in these countries as compared to other countries

Also Inflation is high in these countries as compared to other countries

Exports, imports & health is low in these countries.

Cluster Formation

Hierarchical Clustering

SINGLE LINKAGE

- Difficult to get insights from Single Linkage

• COMPLETE LINKAGE

- Go by Complete Linkage, and consider the value of n clusters as 3

Different Clusters formed by K Means

Select Top 5 Countries

Socio-Economic
factors

Health
Factors

GDPP

Income

Child
Mortality

Hierarchical Clustering- All Variables

Based on above plots we recommend countries belonging to Cluster no 0 because of following reasons:

low value of gdp & income

high value of child_mort
total_fer

Life_expec is low in these
countries as compared to
other countries

Also Inflation is high in
these countries as compared
to other countries

Exports, imports & health is
low in these countries.

Visualizing Clusters for Socio-Economic Factors – Hierarchical Clustering

From all the three clusters, we select the top 5 countries which are common across all clusters, which match the criteria

Socio-Economic factors

Health
Factors

GDPP

Income

Child
Mortality

Visualizing Clusters for Socio-Economic Factors – Hierarchical Clustering
